

01 Service Pillar / Asset Management

Infrastructure Asset Management

Governance, audit-defensible registers, and lifecycle planning. Asset management, spatial planning, valuation and analytics are usually four vendors and four spreadsheets. We run them as one practice on one platform — starting with a register you can defend to an auditor and plan against with confidence.

WHAT THIS COVERS

01

Componentised asset registers (GRAP 17 / GRAP 103)

Asset data structured and componentised to meet GRAP 17 and GRAP 103 requirements, built to withstand audit scrutiny.

02

Condition assessment and remaining-useful-life modelling

Field-based condition surveys translated into defensible remaining-useful-life estimates for every asset class.

03

Lifecycle and renewal planning aligned to ISO 55000

Renewal and maintenance programmes sequenced against budget reality, aligned to the ISO 55000 asset management framework.
